

# Pullet Treatment Program

Detailed below is our standard pullet treatment program for pullets supplied to commercial egg producers at 16 weeks of age.

Backyard pullets, or pullets supplied at younger ages, may not have had all treatments applied at the time of supply.

Beak trimming at day old is of a minor nature, and at 10 weeks is a check and touch up if required.

<b>Vaccination/Treatment</b>	<b>Age</b>
Mareks*2	Day Old
Infectious Bronchitis	Day Old
Fowl Pox	Day Old
Beak Trim	Day Old
